

Steinway & Sons

MODEL S-15

The Model S-15 has been installed in hundreds of high performance home cinemas and living rooms all over the world. It is petite and so discreet it can be installed without compromising décor, but don't let the size fool you. Model S-15 is an incredibly powerful speaker recognized with numerous awards and accolades, making it the clear choice for those seeking perfection at a competitive price point.

LOGIC-DEFYING PERFORMANCE

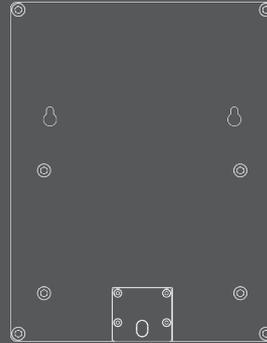

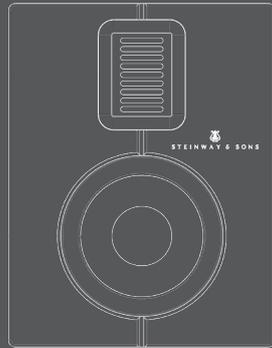

The performance of the petite Model S is nothing short of extraordinary. The reason is partly due to the innovative design of the Steinway & Sons Model S-15 speaker. Because the Model S-15 relegates bass duties to boundary woofers, it reproduces only high and midrange frequencies, and it does both with incredible volume capabilities and zero distortion. Its legendary performance makes it a perfect match for medium-sized high-performance home theaters.

AMBIENCE ENHANCING RADIATION

A key feature of the Model S-15 speaker is its innovative AER (Ambience Enhancing Radiation) dipole tweeter design. This design disperses the highest frequencies, which produces a spacious and live effect throughout the listening room, similar to the effect you get from our flagship Model D speaker or a live instrument.

A MATCH MADE IN HEAVEN

When you combine the Model S-15 speaker with the Model S-210 boundary woofer, you get a small system with big reach. The Model S-15 is a sleek speaker featuring a cabinet CNC-machined from solid aluminum and the innovative AER (Ambience Enhancing Radiation) dipole tweeter design. The Model S-210 boundary woofer is a floor-standing woofer that delivers powerful and tonally accurate bass in a discreet footprint.
